5 Loan approval prediction

1) Key words:

1) Credit score
2) personal income
3) Previous loans verification
4) Identity verification
5) Loan amount

2 Relationship table

Source | Relation | Destination

3 Sample Data :-

Name	ID verification	credit score	Loan amount	approva
Varun	yes	760/900	10,000	yes
Dhamu	yes	640/900	10000	NO
Rafi	yes	780/900	10,000	Ye
Vijay	yes	784/900	10,0000	Y

7. Construct a concept map illustrating the complete Machine Learning workflow for Predicting house prices using suitable ML algorithm.

A. House price prediction

1) Key terms:

i) house

ii) area

iii) Location

iv) Price

v) Bed room

2) Relation table:

Source	Relation	Destination
House dataset	contains	Features
features	include	Area/locations
age	means	House age

3) Sample Data:

House NO	Bedrooms	area	Location score
1	2	500sqft	8
2.	1	250	7

Age	Price
5	15Lar
2	10L

(2) Medical Disease Prediction

1) Key terms :-

1) Patient
2) Age
3) Gender
4) Symptoms
5) Blood pressure
6) Blood sugar
7) Temperature
8) Disease

(2) Relation Table

Source	Relation	Destination
Patient Data set	contains	Patient Details
Age	Influences	Disease Risk
Disease	output	prediction Result

3) Sample Data

Patient NO	Age	Fever	BP	Sugar	Disease
1	35	Yes	140/90	180	Diabetes
2	30	NO	120/80	95	Healthy
3	55	yes	150/95	210	Diabetes

4. Student performance prediction

① Key terms

1) Name
2) Reg NO
3) class
4) Individual subject marks
5) Marks

② Relationship table :-

Source	Relation	Destination
Student Data set	contains	Features
Data preprocessing	produce	clean Data
Clean Data	Split into	training / testing Data

③ Sample Data

Name	RegNO	class	Total / marks	Grade
varun	10566	12th	590/700	B
Arjun	11667	10th	560/600	A
Rafi	12337	12th	980/1000	A
